March 2014

The stars shine bright at graduations

NASA Administrator Major General Charles Bolden was one of a stellar line up at March graduations, when he and three eminent Australians were awarded honorary doctorates from the University. Former UniSA Vice Chancellor Professor Peter Høj, author and feminist thinker Anne Summers, and winemaker entrepreneur Wolf Blass were honoured across the week. [Full story...](#)

Wine study shows locals love the cellar door

[Back to story index](#)

by Michèle Nardelli

A new study into cellar door operations at Australian wineries has shown that most visitors to wineries are Australian locals, with the typical visitor being a female visiting for the first time.

The national longitudinal research, funded through the Grape and Wine Research and Development Corporation (GWRDC) and taking in six Australian States and including 15 wine regions, is painting an interesting picture of the cellar door visitor.

"Not only are most of them local, they are also influenced to attend wineries by their own local knowledge and knowledge of the winery brand, and 46 per cent of those surveyed said word-of-mouth recommendation or informal sources influenced their winery visit," says UniSA Project Leader Professor Johan Bruwer.

In its first stage, the inter-institutional research project involving UniSA's wine marketing research specialists and colleagues at Charles Sturt University, is based on surveys of 3600 cellar door visitors, at 79 wineries across Australia.

Researchers found the typical cellar door visitor profile is female, a regular wine-drinker, highly educated, has a small household and high income and is far more likely to be from an Australian capital city than another country.

"Only six per cent of the total number of visitors to cellar doors are from overseas, but interestingly almost 60 per cent of all visitors are first-timers, so the cellar door offers real opportunities to impress consumers," says

Prof Bruwer.

“Around 67 per cent of visitors to the cellar doors bought wine to take away, and altogether, 75 per cent of visitors did not leave without buying at least something.”

Researchers also found that many cellar door visitors are also wine club members of the winery visited and/or of other wineries, and overall had a good knowledge of wine brands and some loyalty to them.

“We’re also suggesting there may be an association with buying or trying a particular brand of wine and then visiting the cellar door – so it seems there is a flow between wine brand recognition and the cellar door experience,” says Prof Bruwer.

Those surveyed were mostly regular drinkers consuming mainly red (49 per cent), white (35 per cent), and sparkling wine (10 per cent).

University of
South Australia

UniSA News

March 2014

From the Vice Chancellor

[Back to story index](#)

You're probably very aware by now of the broad vision we have for the future of this university. Many of you were closely connected with **Unijam**, which was held 10 months ago, and in the compilation of the action sets we are taking to deliver on our promises.

A major change was in our focus as a university. We're not content to be just the best in South Australia. We're positioning ourselves to be a nimble and focused institution that can respond to local, national and global changes. The emphasis is on global.

Action Set 6 in *Crossing the Horizon* committed us to being a globally visible university with global reach and leverage. We're about to launch our Global Engagement Framework and if you missed the presentation in the Bradley Forum here's an update and an invitation to come and discuss the plans in future forums.

Why global you might ask? Because it is essential for any university that wishes to remain at the cutting edge of the disciplines it teaches to be partnered with the science, technology, biotech, cultural and economic powerhouses of the world. We need to be able to access and deliver – and help create – the new knowledge that will differentiate UniSA from our competition and enhance our reputation as the go-to university for business and the professions.

Then there's the need for rankings. We're a young university and rankings are often the only measure that

academics and employers use in judgement. There are, after all, more than 10,000 universities worldwide; it takes a number on that list to help identify you. That's why we care so much about stats – such as being in the top three per cent of the world's universities and being ranked in the world's top 50 universities under 50 by THE and QS rankings. As our rankings continue to improve, more academics want to work with us and more employers want our graduates.

And being a globally visible university increases the number of international students who are attracted to our campuses. A healthy proportion of students from outside Australia helps to provide the kind of international environment that makes university such a vibrant place for students who can then learn from each other, broaden their horizons and build the personal and potential professional networks they need for their future global careers.

Not only are we focused on bringing more students here, in *Crossing the Horizon* we committed to increasing UniSA's offshore footprint across the Asia-Pacific through international campus collaborations.

Back in 2007 we started withdrawing from our transnational operations and, while there were good reasons for doing so then, there was a perception that our engagement in the Asia Pacific was a less than committed one. We learned some lessons – that's the business we're in after all – and we're back in the region stronger than ever.

We're offering a new set of programs through Hong Kong Baptist University and in Singapore we're creating a dedicated space on Orchard Road in the CBD that's branded UniSA. We'll be the only foreign university to have a dedicated city centre campus and, in true UniSA style, there will be a strong element of employer engagement. Internships and career opportunities are integrated into the programs and reinforced by a dedicated Director of Employment and Industry Engagement with a contact book you couldn't jump over. This campus will offer UniSA programs, initially from the Business School, EASS and ITEE, with Health Sciences to follow.

Global reach and leverage was our initial goal but global mobility sounds pretty good too, not just for offshore students to get the same UniSA experience as their onshore colleagues, but for local students and for our staff to travel and make their own global connections.

Nobody around here stands still for long.

Professor David Lloyd
Vice Chancellor and President

Australian public law and human rights expert named new Dean of Law

UniSA has appointed internationally recognised expert in Australian public law and human rights, Professor Wendy Lacey (pictured right), as its new Dean of Law.

Prof Lacey, who has been with UniSA's Law School since it was founded in 2007, was appointed from an international field of academic candidates and will take up the position next month.

UniSA Vice Chancellor Professor David Lloyd says he is delighted with the appointment of someone who has proven herself internationally and locally.

"Wendy brings a real commitment to the University, but also a depth of experience, research and knowledge in her field," Prof Lloyd says.

"I am very pleased that after a worldwide search, we found the best candidate for the job here at UniSA."

Delighted with her appointment, Prof Lacey says she is looking forward to further building the reputation of the UniSA Law School in Australia and globally.

"It will be an exciting challenge to lead the School at this time of great opportunity and growth," Prof Lacey says.

For more information on Prof Lacey's appointment, see the related [media release](#).

New Hawke Centre director

Former OzAsia Festival Director Jacinta Thompson (pictured right) will be the new Executive Director of the Bob Hawke Prime Ministerial Centre from the end of April, following the retirement of inaugural director, Elizabeth Ho.

The centre was established in 1997 in honour of former Prime Minister Bob Hawke and is the flagship for UniSA's intellectual engagement with the community.

UniSA's Vice Chancellor Professor David Lloyd says he is delighted to announce Thompson's appointment to the helm of the Hawke Centre.

"Jacinta has extensive experience in high profile roles, engaging the community in the exploration and appreciation both of diverse cultures and across a broad spectrum of the arts," Prof Lloyd says.

"Jacinta has been the Festival Director of the much-celebrated OzAsia Festival for over seven years, and prior to this held positions including programming executive for dance and theatre at the Adelaide Festival Centre, Executive Producer of the Adelaide Cabaret Festival, and Education Manager at the Sydney Theatre Company.

"Her expertise will be particularly relevant in furthering the University's community engagement as a university of enterprise and I warmly welcome her to UniSA."

An alumnus of UniSA, Thompson says she is thrilled to be joining the Hawke Centre and the University.

"I greatly admire and value the work of the Hawke Centre and I am thrilled to be part of this unique and vital centre that is devoted to generating ideas and solutions to achieve cohesive, sustainable societies," Thompson says.

Promoting the message 'Think, Connect, Act', the Bob Hawke Prime Ministerial Centre runs a public events program aimed at 'strengthening democracy, valuing diversity and building our future'.

To see the upcoming free public events being hosted by the Hawke Centre, visit its events calendar [website](#).

Arts grad chosen for prestigious photographic prize at National Gallery

Bachelor of Visual Arts (photography) graduate Molly Harris (pictured right) is one of 45 Australian artists chosen to be featured in the prestigious National Photographic Portrait Prize exhibition.

Harris, who finished her degree at the end of last year, said she is excited that her work has been chosen for this competitive exhibition.

"I was blown away to be honest," she said. "I really didn't think I would actually get through.

"I'm really excited and humbled that my work was chosen. It's nice to have validation that my work is exciting and interesting to other people, and this encourages me to pursue it."

Harris's work documents people with heroin addictions – something she finds interesting but understands that it can be quite confronting to other people.

"It's nice to find work that I find interesting and that other people – like the judges of this competition – are also interested in."

The National Photographic Portrait Prize is an annual event intended to promote the very best in contemporary photographic portraiture by both professional and aspiring Australian photographers. The Gallery is offering a prize of \$25,000 for the most outstanding photographic portrait.

The exhibition opened on March 21 at the National Portrait Gallery in Canberra before travelling to other galleries in Australia.

"This exhibition is the most prestigious photography portrait award in Australia, a huge number of people enter and it is an honour simply to be chosen for the exhibition," said UniSA Studio Head of Photography and New Media, Mark Kimber.

"Molly is one of our finest and most hard-working students ever, and we are very proud of her accomplishment."

Harris is now considering postgraduate study at UniSA this year.

An example of Molly's final year photography work.

Angel Lopez appointed to Australian Cancer Research Foundation Committee

Centre for Cancer Biology co-director Professor Angel Lopez (pictured right) has been appointed to the Australian Cancer Research Foundation's (ACRF) Medical Research Advisory Committee (MRAC).

Prof Lopez is one of 16 members of the MRAC, which is chaired by co-creator of the cervical cancer vaccine Professor Ian Frazer, and includes cancer scientists of the highest national and global repute.

Prof Lopez says his role on MRAC is to select and recommend the very best Australian research for funding by the Foundation, ensuring maximum impact and innovation in cancer prevention, diagnosis and cure.

"I'm excited to be joining the Foundation's MRAC to tackle the task of funding the next possible breakthroughs in cancer," he says.

Prof Lopez's appointment to MRAC is for three years.

The Australian Cancer Research Foundation awards up to \$10 million in research grants each year.

UniSA shines at construction competition in Texas

An image from the UniSA/Oklahoma University winning design.

For the second year running, UniSA students have teamed up with students from Oklahoma University to win a design and build competition in the United States.

Three UniSA students and a Program Director/Senior Lecturer travelled to Texas in February to take part in the Associated Schools of Construction Regional Competition (region 5), a competition held across the United States to test construction industry skills of university students.

For the second year, UniSA joined forces with Oklahoma University to field an international team in the competition.

Construction Management and Economics students Luke Ferme and Jake Harry along with Architectural Studies student Aaron Davies and their Oklahoma teammates had 16 hours to deliver a design for a church complex.

Dr Terence Lam, Program Director and Senior Lecturer in the School of Natural and Built Environments said the timeline of 16 hours was particularly challenging for the team.

"All the team members took the competition very seriously and deserve the prizes they won," Dr Lam said.

"The students enjoyed the team work but most importantly, the international student exchange experience.

"Plans are already underway for next year's competition with the possibility of the Oklahoma team members spending some time at UniSA before the competition.

“This would certainly be a good idea in regards to the team being able to meet in person and prepare for the competition, as well as the exchange benefits for their students.”

As well as taking out first place in the Design and Build Competition, Aaron Davies was awarded the best presenter prize.

“It is a great honour for UniSA to be awarded these prizes in what is a competitive program in the United States,” Dr Lam said.

“We are very thankful to the School of Natural and Built Environments and the School of Art, Architecture and Design for supporting this event which provides an excellent learning experience for the students.”

The winning UniSA and Oklahoma University team including (front row, fourth from left) Luke Ferme, Aaron Davies, and Jake Harry; and (front row, end right) Terence Lam.

New node paves way for nano-medicine

UniSA’s expertise in nanomaterials design, cell biology and engineering are at the forefront of a new Node in a \$26 million ARC Centre of Excellence in Convergent Bio-Nano Science and Technology (CBN).

UniSA is one of four nodes of the Centre which is headquartered at Monash University.

UniSA Node Leader and Deputy Director of the Mawson Institute, Professor Nico Voelcker says the Centre will deliver breakthroughs in areas in which Australia has major strength, including diagnostics and imaging, smart biomaterials, vaccines and drug delivery.

“The research will see the biomedical advances such as the development of nano-sized drug delivery devices targeting tumours, immune cells,” Prof Voelcker says.

“At the same time, we will see the emergence of sensors that can diagnose diseases well before conventional methods can, or provide in-situ feedback on disease treatment efficiency.

“Fostering technology innovation and the sustained growth of high value manufacturing are critical for the Australian and South Australian economies.”

Fellow member of the node, Professor Thomas Nann says the breakthroughs delivered through the centre will be based on an advanced understanding of the fundamental science at the interface of engineered materials and biological systems.

UniSA’s involvement in the Centre has been backed by \$300,000 in funding from the State Government’s Collaboration Pathway Program.

Local innovators take home international technology award

Against some high-powered competition, UniSA’s Institute for Telecommunications Research (ITR) has won an international award for innovative communications technology.

ITR’s Global Sensor Network (GSN) has been voted Technology of the Year 2013 by the Wireless Innovation Forum, a non-profit ‘mutual benefit corporation’ dedicated to technology innovation in commercial, civil, and defence

communications around the world.

The GSN won the award against some strong competition from NASA, which was nominated for a communication system, developed for the International Space Station.

GSN technical director, Dr David Haley says the GSN was developed for remote data collection and bidirectional communication via low earth orbit satellites.

ITR Acting Director Jeff Kasparian and Senior Research Fellow David Haley accepting the award.

ITR Acting Director, Jeff Kasparian and Senior Research Fellow and GSN Technical Director, Dr Haley both accepted the award at the Wireless Innovation Forum's annual WinnComm Conference in Illinois.

"The GSN program represents a significant outcome, with contributions from 28 academics and engineers within ITR. I'm immensely proud of what David and his team have achieved," Kasparian says.

GSN partners included COM DEV (Canada) and SAGE Automation, CSIRO, DSTO and the Australian Institute of Marine Science. The development of the Global Sensor Network was assisted by funding from the Federal Government's Australian Space Research Program.

New study looks at downsizing options for seniors

Housing is one of the major challenges for our ageing population, according to the Australian Government's Advisory Panel for Positive Ageing. But a new joint University of Western Australia-UniSA study is set find out how to ease the transition from a large family home to a more suitable and often smaller home while maintaining senior citizens' independence.

Led by Professor Wendy Lacey, the study will investigate what obstacles senior citizens face when considering housing options. She says the study will assist in informing planning laws and policy, with the aim of reducing the barriers senior citizens encounter when downsizing.

"We want to find out why people do or more importantly don't choose to downsize," Prof Lacey says.

"We suspect a lack of appropriate housing options within an older person's existing area is the problem, along with impediments caused by existing planning laws which deter the development of suitable and innovative housing for people to downsize to.

"Often people want to downsize but they don't necessarily want to move into retirement villages."

Researchers are currently looking for people over 50 years of age to take part in the study. Participation involves an interview, with questions relating to the reasons why seniors choose to or not to downsize and what needs to be done from a legal, planning and/or policy perspective to enhance the options for downsizing.

To participate, contact Professor Wendy Lacey on (08) 8302 7127 or wendy.lacey@unisa.edu.au.

Australian cities app launches

An app that provides users with information about what to experience, eat and drink, and how to get around Australia's capital cities has been launched by a former UniSA staff member who still retains strong links with the University.

Bill Cooper, currently doing IT contract work for the

Cooperative Research Centre for Contamination Assessment and Remediation of the Environment and formerly the IT manager for the Institute for Telecommunications Research, has published his Australian Cities app in the Apple App store and is currently working on an Android version.

Bill Cooper with the Australian Cities app.

"It's an invaluable app for everybody who lives in or visits any of Australia's capital cities," he said.

"It is particularly useful for recently arrived overseas students and tourists, as it is packed full of information on what to see and do, eat and drink, and how to get around – all with in-app web and map display, including the distance from you to the place of interest, and in the 'What's On' section there are dynamic updates of current and future events. These include upcoming arts, theatre, concerts, festivals, sports and more."

He says one powerful feature of the app allows the user to share details of any of the events and attractions directly via Facebook, Twitter, email and text.

Unijam quick wins in action across campuses

[Back to story index](#)

A number of projects that stemmed from UniSA's community planning online conversation, unijam, and were then included in the Crossing the Horizon plans released last year, are coming to fruition.

The new **Campus Connector** shuttle bus service between Magill and Mawson Lakes is now running as a trial for study period two. The free bus service for staff and students (ID card needed) departs from the two campuses every hour from 9.10am to 4.10pm, Monday to Friday.

A virtual **suggestion box** for staff and students is live on the staff and student portals. A number of suggestions have already been received and feedback on actions will be taken on the 'we're listening' [website](#).

Full **video lecture recording** is now being piloted in two lecture theatres. After study period two, an evaluation will take place and determine the way forward for this project.

A '**Go Mobile**' strategy has been developed and a mobile-friendly [website](#) has been launched.

A competition will run for students to suggest an app that they would find useful for their study with the best three being adopted. Students have already been consulted about a wider UniSA app which is currently being finalised.

Students were also heavily consulted about UniSA's new campus clothing line. The new range of t-shirts and hoodies is available at Unibooks or University of South Australia Student Association (USASA) counters across all metropolitan campuses. They are also available from Whyalla Campus Operations Unit and Mt Gambier Campus Reception area or [online](#).

And as work on the Jeffery Smart Building on the City West campus comes close to completion, the campus has brightened up its George Street walkway with a student mural (featured in last month's [UniSA News](#)).

The University has also launched a Global Engagement Framework and new offshore campus collaborations, as well as the evolution of the University's regional engagement strategy.

Professor Larry Lockshin, Pro Vice Chancellor of Strategic Coordination, says in the next few months there will be further announcements on the Reconciliation Action Plan, Smoke Free Campus and capital plan.

Students sign up for one-way ticket to Mars

[Back to story index](#)

by Rachel Broadley

While UniSA students have their sights set on goals all over the globe, three students have gone a step further and are looking to become some of the first people to live on Mars.

They might just accomplish their dreams, having made the cut from 200,000 applicants to a shortlist of just over 1000 for the Mars One project.

There's a catch, however, as the ticket to Mars is one-way only. But Mechanical Engineering student Tristan Perkins (pictured right) says he would be happy to live out the rest of his life on the red planet in the spirit of discovery.

"I applied to be part of the Mars One project because everyone on earth from Archimedes to Einstein was born, lived out their lives and died on Earth; I want to break new ground," Tristan says.

"I think that a future where we are a space-faring civilisation is a much more exciting and inspiring future than one where we are not."

The Mars One project, the brainchild of Dutch entrepreneur Bas Lansdorp and space researcher Arno Wielders, aims to establish a permanent human settlement on Mars. Crews of four will depart every two years, starting in 2024.

Tristan says he has always been interested in space exploration, and chose to study mechanical engineering to help him in his future career.

"When I started studying mechanical engineering my goal was always to study postgraduate aerospace engineering, and hopefully either work for a rocket or a satellite firm, or become a pilot in the military," he says.

"From the mechanisms in a clock or a car to how the universe started, I enjoy exploring how and why things work, which is a passion I could easily transfer to the mission. There will also be lots of construction and things needing to be maintained or repaired, so being mechanically minded would be helpful."

The next step in the application process involves examinations by a general practitioner, a psychologist and an optometrist, before an interview with the Mars One selection panel. Eventually the current field of 1058 will be reduced to 40, who will undergo rigorous training and simulation testing.

"I am passionate about science and technology, and whether I make it through to the final group of astronauts or not, I hope this gets people interested in talking about science and technology because there's a huge gap in the conversation," Tristan says.

Josh Richards, who was a student at the Southern Hemisphere Summer Space Program (SHSSP) run annually by UniSA in partnership with the International Space University (ISU), first heard of the Mars One project when he was researching a comedy show about the frustration he felt that humans hadn't left low earth orbit since 1972 and how we can only send people one-way to Mars.

Josh, a stand-up comedian and science communicator, says within minutes of researching the show he found that Mars One had made its first major press-release just three days before.

"I knew from my physics degree that the real financial and technical challenges of exploring Mars were the return trip," Josh says.

"Rather than write a comedy show about how we should be colonising Mars and being frustrated that we haven't, I started writing a show about how we were going to colonise Mars, which I ended up touring around the country and performing at the Mars One Living on Mars Convention in the Netherlands last November.

"In April 2012 when applications opened I put my money where my mouth is and applied!

"I studied with UniSA/ISU as it was an amazing opportunity to learn about how the space industry works, meet some of the key players (and a few astronauts!), and see how I could use my skills and strengths to contribute to the exploration of space.

"The Mars One project presents an incredible opportunity for everyday people who would otherwise be prevented from becoming astronauts (primarily by national politics) to participate in the expansion of our species beyond low Earth orbit."

Fellow SHSSP student Sarah Fitzjohn completes the stargazing trio.

The stars shine bright at graduations

[Back to story index](#)

by Rosanna Galvin

(L-R) Belle Hope, Major General Charles Bolden and Nicholas Haley.

NASA Administrator Major General Charles Bolden was one of a stellar line up at March graduations, when he and three eminent Australians were awarded honorary doctorates from the University. Former UniSA Vice Chancellor Professor Peter Høj, author and feminist thinker Anne Summers, and winemaker entrepreneur Wolf Blass were honoured across the week.

And for more than 1000 local school students the rare opportunity to hear from one of the world's leading space pioneers during his visit was enthusiastically received.

At a special event prior to receiving his award, Maj Gen Bolden shared his inspiring story with a captivated audience, urging the young students to reach for the stars.

Speaking of his own experience as an African American growing up in a segregated society, Maj Gen Bolden told the students to let nothing hold them back from chasing their dreams.

"Don't let the colour of your skin, your gender, where you're from or what part of town you live in, limit what you can achieve in life," he said.

In addition to the honorary doctorates awarded at graduations, retired Pro Vice Chancellor of the Business School, Professor Gerry Griffin was also awarded an Emeritus Professorship.

(L-R) Vice Chancellor Professor David Lloyd with Maj Gen Bolden.

(L_R) Wolf Blass with Deputy Vice Chancellor and Vice President: International and Advancement, Nigel Relph.

(L_R) UniSA Chancellor, Dr Ian Gould AM, Anne Summers and Vice Chancellor Professor David Lloyd

(L-R) Professor Peter Høj with Vice Chancellor Professor David Lloyd.

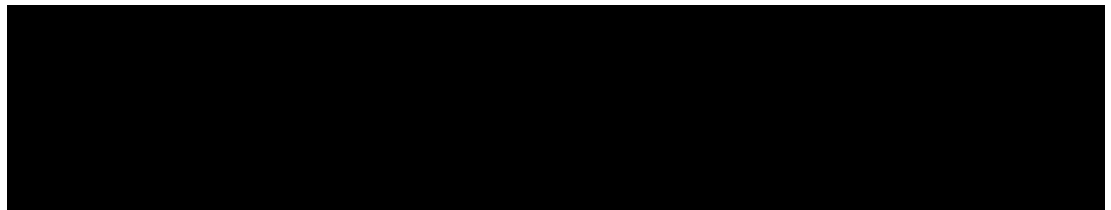

More than 5000 students graduated from the University during the week. Among them was Trevor Ritchie, who crossed the stage to become the first Indigenous occupational therapist in South Australia.

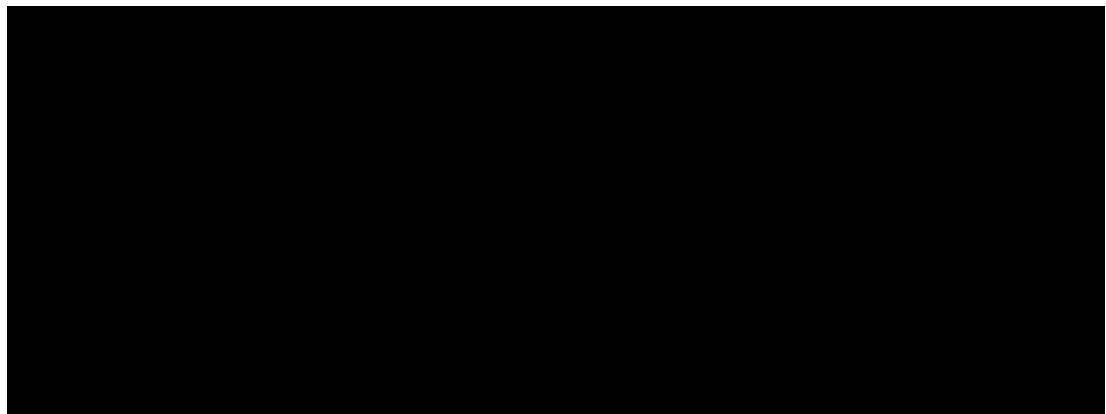

UniSA Vice Chancellor Professor David Lloyd said graduations are a time to celebrate the next generation of professionals entering the workforce, and at the same time reflect on those who have already made a huge contribution to the community.

"This is when we celebrate not only students' hard work and success but also the potential of what comes next in their careers," Prof Lloyd said.

"Our students are graduating from university with a drive to have a real impact on the world, to make their mark in their chosen field and at the same time to work towards a better society.

"In conferring special awards we are recognising the inspiring example of outstanding individuals who have already contributed so much to the community throughout their remarkable careers.

"Charles Bolden forged a highly successful international space career in an era where barriers for African Americans were almost insurmountable.

"Here in Australia, Anne Summers was a leader of the generation and the movement that changed Australia for women and contributed to increasing women's participation in higher education.

"And the Wolf Blass story is an exemplar of the spirit of enterprise. From his modest beginnings, Wolf went on to build one of Australia's most awarded and successful wineries and wine brands."

Prof Lloyd said this year's graduation ceremonies were also a chance to honour the fundamental role Prof Høj and Prof Griffin have each played in the evolution of UniSA.

"Peter made an indelible mark on the University during his five-year tenure as Vice Chancellor and President," Prof Lloyd said.

"Under his leadership, UniSA became one of Australia's most rapidly developing universities. For two consecutive years (2010-11), UniSA was the most improved Australian university in the QS World University Rankings – only five universities improved their position since 2009, and UniSA's ranking moved from 19 to 11 in Australia.

"Gerry also played an important part in UniSA's history – he was instrumental in winning EQUIS accreditation for the Business School which was re-accredited in 2007, 2010 and again this year for another three years.

"In addition, he conceived, planned and initiated a new Law School which awarded its first graduates in March 2011."

Two Fulbrights for UniSA

[Back to story index](#)

Two UniSA PhD students are among 31 from across Australia who have been awarded a prestigious Fulbright Scholarship that will see them travel to America for up to 10 months to further their research.

Sadie Heckenberg (pictured right) from the David Unaipon College of Indigenous Education and Research, won the Fulbright Indigenous scholarship which will see her study at the University of Hawaii Manoa, Honolulu, at the Centre for Oral History.

Sadie's research aims to address the need to protect Indigenous spoken cultural language.

She says by developing her knowledge of Indigenous epistemologies of the Pacific, she will in turn build the depth and strength of research to take back to her home community, the Wiradjuri community in New South Wales.

"I am truly excited to be able to study with some of the best minds in the Indigenous oral history field," Sadie says.

"The Hawaiian knowledge systems have been nurtured and maintained by wise Eldership reflected not only through the achievements of Hawaiian academic research but in society itself."

Suzanne Schultz (pictured right) from the School of Pharmacy and Medical Sciences won the Fulbright SA State Category Postgraduate scholarship which will see her study at the Harvard Kennedy School of Government in Massachusetts.

Suzanne's research focuses on international and inter-sector collaboration in drug development. In particular, her research in the US will consider the impact and effectiveness of proposed models for identifying, developing and commercialising new, or reviving existing, antibiotics.

She says that as the largest clinical market for pharmaceutical drugs and a key regulatory environment, the US offers unparalleled expertise and network opportunities.

"Contrasting and comparing the business models and ideas in facilitating antibiotic development with approaches in Europe and Australia will open new opportunities to work differently," Suzanne says.

The Fulbright program is the largest and one of the most prestigious educational scholarship programs in the world. It operates between the United States and more than 155 countries worldwide.

It was established in Australia in 1949 through a binational treaty between the Australian and US Governments. It has supported almost 4800 scholarships.

UniSA leads new \$88 million CRC in big data

[Back to story index](#)

UniSA is now the national headquarters of another Cooperative Research Centre (CRC) – the \$88 million Data to Decisions CRC which is set to boost national security.

Announced in February, the Data to Decisions CRC is expected to help build a substantial big data industry, which will position Australia as an international exemplar in the development and use of big data capability across many sectors.

The new CRC places UniSA at the forefront of industry and academic research collaboration, with the University now leading three CRCs and partnering in 10 more.

The Data to Decisions CRC will be led by Dr Sanjay Mazumdar who heads up the Defence and Systems Innovation Centre, a joint venture between UniSA and the University of Adelaide.

Dr Mazumdar says the overarching research challenge being addressed by the CRC is 'how does the defence and national security sector efficiently extract intelligence and unforeseen insights from big data within a balanced privacy paradigm?'.

"Every day, society creates 2.5 quintillion bytes of data from disparate sources including satellite imagery, social media content, digital pictures, videos and voice recordings," Dr Mazumdar says.

"This data is referred to as big data and it cannot be efficiently analysed using traditional data processing applications.

"The National Security Strategy for Australia highlights the importance of timely and accurate intelligence as a powerful weapon against security threats.

"Addressing big data challenges and applying high-performance analytics can make the difference between predicting a threat and reacting to a catastrophic aftermath."

The new CRC has been funded for five years by a \$25 million CRC grant and \$62.5 million participant

contributions. It will involve researchers in areas of computer science, engineering, business and law from UniSA, the University of Adelaide, the University of New South Wales, Deakin University and Carnegie Mellon University, with industry input from IT and systems integration companies, consulting companies and small-to-medium enterprises in collaboration with state and federal national security agencies.

Internships in Japan

[Back to story index](#)

by Katrina Phelps

Time spent on a new internship program in Japan is proving to be very worthwhile for UniSA students.

Already two students have completed a six-month credit-bearing internship at Japan Display Inc (JDI), a company that is a major supplier of business and employee services to leading Japanese companies, while another two students are currently in Japan. This opportunity is supported by FujiWork which is in partnership with JDI.

For Master of Human Factors and Safety Management Systems student Jaimie Dolling, the six months in Japan is an opportunity that she would highly recommend, as would her fellow intern Stephanie Crook.

"I loved having the opportunity to travel to another country and to be exposed to their culture, to live there and be completely immersed in it," Jaimie said.

"I loved the work and being able to experience working in a foreign country and gain an understanding of how work is conducted in Japan.

There were also opportunities to work in areas that I had not worked in before which was very exciting, and has given me the chance to round out my skills.

“The work ethic and working culture in Japan is a lot stronger than I have experienced in Australia. People work five to seven days a week and it is normal to be working overtime and not to leave until your boss leaves.

“I would recommend that if anyone has the opportunity to go, they take it. It will give you a completely different perspective on the world, work, relationships and culture.”

Ella Ward (pictured far right), a Bachelor of Management (Marketing) and Bachelor of International Relations student who is currently in Japan, agrees that grabbing hold of opportunities like this internship is highly recommended.

“If you study and have a desire to travel, the two can work together,” Ella said. “I’m not sure if students are fully aware just how supportive the University can be when it comes to study-related travel.

“A lot of people assume you can only do an exchange if you study another language but that’s not the case. There are all types of international programs available, not only for study but for internships such as this one and also for short-term programs for aid work, etc. There are so many programs on offer that people can look into – it’s really a great quality of UniSA.”

Before starting the JDI internship, Ella had spent five months in Japan on an exchange program with funding from the University.

“The internship appealed to me because it meant I could extend my stay in Japan with hopes to see a different side of the country,” Ella said.

“I was also eager to get my foot in the door of a renowned international business and a high priority for me was continuing to improve my Japanese language skills.

“So far the internship has been really interesting. I think the internship is ideal for engineering students, or perhaps those studying inter-business management, finance or human resources and those with an interest in production. The internship is based at a manufacturing plant so for engineering students, it’s truly unsurpassable.”

Joining Ella in Japan is Jack Baker, a Bachelor of Mechanical and Mechatronic Engineering student who is basing his final year project on the work he is doing at JDI.

The JDI internship program is supported by funding from the Australian Government’s New Colombo Plan which offers Australian undergraduates new opportunities for prestigious scholarships and grants for study and internships in the Indo-Pacific region.

Jaimie Dolling and Stephanie Crook climbing Mount Fuji.

Students Jack Baker (centre) and Ella Ward (right) on their first day at Japan Display Inc.

Stephanie Crook (third from left) and Jaimie Dolling (right) at a conference with JDI staff.

The program was developed because of ITEE community engagement with the City of Salisbury which has a sister city agreement with Mobara City where JDI is based.

Manager of the UniSA program, Gail Jackman from the Division of Information Technology, Engineering and the Environment, said the internship projects are designed around the student's academic discipline to ensure maximum outcomes from this international experience.

"The internships will be in divisions of the company and in the context of activities directly relevant to the students' majors," Jackman said.

"The student interns are exposed to state-of-the-art manufacturing and technology including robotics, innovation, world-class business practices and marketing techniques, taking into account sustainability and the environment, and working in good and safe conditions.

"The interns are spending spend 3.5 days per week in the JDI working environment. The other 3.5 days per week the students have activities organised for them to immerse themselves in wider Japanese life and deepen their understanding of Japanese language, culture and traditions."

The program is ongoing and may expand to more students for each intake.

Wanted: 150 mentors to help high school students reach for the stars [Back to story index](#)

by Rosanna Galvin

Fern Seacombe, (right) with fellow AIME participant Kim.

The program which brought billionaire entrepreneur Sir Richard Branson to the University last year and is raising Indigenous student high school completion rates across the country is back at UniSA for a second year.

The Australian Indigenous Mentoring Experience (AIME) – a nation-wide educational program that gives Indigenous high school students the skills, opportunities and confidence to finish school at the same rate as their non-Indigenous peers – is ramping up its operations at UniSA with a goal to recruit 150 new university mentors this year.

The mentors will work with 300 Aboriginal and Torres Strait Islander high school students in Adelaide's northern and western suburbs, conducting sessions on everything from résumé-writing to hip hop.

One of the students who was part of AIME's inaugural year at UniSA is Fern Seacombe (pictured bottom right). A public relations and world politics student, Fern says she joined the mentoring program with hopes of helping teenagers reach their full potential, but what she got out of the program was far greater than that.

"I wanted to encourage the children to reach for the stars as I am a huge believer that children can create their own

future no matter what – they just need someone to say ‘hey, you can do this, I believe in you’,” she says.

“The best part of AIME for me was seeing how the children changed over the year. They started off shy but after a few sessions they started talking about their dreams and ambitions. Some of them shared their stories with me – life seemed so tough for some of them and yet every time I saw them they were smiling and singing.

“They were so much fun to be around but most importantly, they showed me so much about strength and resilience. It was a very humbling experience. They taught me a lot about life and helped me with my own journey.”

Fern’s own path to university hasn’t been smooth but she hopes her experiences will help the mentees relate to her and see what is possible with the right attitude.

Diagnosed with ADHD, dyslexia and dysgraphia as a child, Fern says education has been a challenge for her.

“To say school was hard for me would be an understatement. However my story is not unique and there are many children having the same struggles as I did or even going through worse,” she says.

“What has helped me succeed at university is finding motivation through teaching children at a local swimming centre. I have worked with some amazing children, many of whom were facing hard challenges.

“I soon learnt that while not every story is the same, and some could be worse than others, the truth is everyone is facing challenges and everyone is trying to overcome them.

“This became my motivation to do well to conquer my challenges and set an example for all the children I work with. I was surprised to see how much achieving my goals would motivate children to overcome their own challenges.”

UniSA’s Adjunct Associate Professor Rosie Le Cornu, who has worked in the field of education for more than two decades, says mentoring can have huge benefits for mentors as well as the mentees. She says the mentee is provided with support, while the mentor is provided with opportunities for reflection on practice and is affirmed for their experience and expertise.

“It works best when we move away from a conventional mentoring model – with its traditional hierarchical relationships – to a co-mentoring model,” says Assoc Prof Le Cornu.

“Here both mentor and mentee are positioned as learners and a reciprocal relationship can develop where both the mentee and mentor can learn from each other.

“I think university students participating in the AIME program have a lot to gain from the experience. It’s an opportunity to reflect on themselves and on their values and attitudes and to learn more about themselves in the process.”

UniSA offers a number of opportunities for both mentors and mentees. For more information on some of the opportunities available, go to the [Global Experience webpage](#).

To find out more about the AIME, go to their [website](#).

Arts success for UniSA graduates at Helpmann

[Back to story index](#)

by Rachel Broadley

Adelaide was a-buzz with the arts throughout Mad March, and UniSA graduates enjoyed their share of the limelight with many exhibiting their art at events across the city and beyond.

Fourteen of the 33 graduates displaying their talent at the recent Helpmann Academy Graduate Exhibition were from UniSA's School of Art, Architecture and Design, with six winning awards.

Zoe Kirkwood (pictured right), who studied a Bachelor of Visual Arts (Honours), won two awards for her large-scale installation *The Neo-Baroque Spectacle*.

Zoe won the Hill Smith Gallery/Helpmann Academy Friends Award, valued at \$5000, which provides for travel to any destination in the world and cash towards living expenses, as well as the \$3000 City of Adelaide Award, supported by the Adelaide City Council, giving her the opportunity to exhibit her work at Art Pod, an Adelaide City Council exhibition space which launched in 2013.

"It was incredibly amazing. *The Neo-Baroque Spectacle* has been an all-consuming year-long project and it is really fantastic to have it received in such a positive way," Zoe said.

"The work is based on ideas of contemporary excess and uses the baroque as a framework to explore these. The installation draws, in particular, on the notion of the bel composto from the 17th century baroque spectacle in which painting, sculpture and architecture were unified.

"I have just been accepted into the national graduate show *Hatched* in Perth at the Perth Institute of Contemporary Arts and will be installing my work there in May for the show. I also have an exhibition in the Project Space at the Contemporary Art Centre of South Australia in late April which I am really excited about and am busy

Zoe Kirkwood with her work. Photograph by Che Chorley.

making work for.

“As for the travel prize money, it’s been such a crazy few weeks I have yet to really think about where I’d like to go! One option I would love to look into would be to do a residency along with it.”

Fellow UniSA graduate Tom Borgas will also be offered an exhibition at Art Pod after receiving a high commendation by Adelaide City Council.

The Council also presented Honours graduate and ceramic artist Sophia Nuske with a \$2000 acquisitive award. Her series of delicate hand-built stoneware pencils (pictured below right) will become part of the council’s collection of artworks exhibited across the city.

The SALA Festival Award was presented to joint winners, both of whom are UniSA graduates. Emily Clinton and Jessica Hansen won \$500 each as well as a Premium Registration for the SALA Festival 2014.

Elizabeth Emery, who is currently completing Honours, was named as the recipient of a new Gallery Mentorship program, an initiative of the Women’s and Children’s Hospital Foundation. Elizabeth will spend the next 12 months curating a unique gallery space at the Women’s and Children’s Hospital (WCH) under the guidance of WCH Foundation Arts in Health Coordinator Jill Newman.

March 2014

Architecture students' vision for hospital site remodel [Back to story index](#)

by Katrina Phelps

A UniSA graduate, student prize winner and tutor will travel to Europe later this year to further explore his idea of adapting the Royal Adelaide Hospital (RAH) site into a new performing arts school and concert facility.

Jet O'Rourke (pictured right) won the 2013 Architectural Travelling Prize in Architecture from the Architectural Practice Board of South Australia (APBSA), valued at \$5000, to go towards developing his research into adaptive use of modernist buildings like those on the existing RAH site.

Fellow graduate Tom Hocking (pictured below) was also successful in the RAH International Design Competition, being one of two winners in the Student Design Competition. His entry sought to create greater possibilities for social interaction within the public realm of Adelaide through a master plan of the RAH site underlined by the belief that the fuller the city, the better.

For Jet, he says travelling to Germany, London and Paris – places with a lot more experience at dealing with preservation of heritage buildings – will help him build on the research undertaken last year during his Master of Architecture.

"I'd like to use the RAH as a case study of how Adelaide architects could approach the preservation and adaption of our modern heritage," Jet says.

"Although it is questionable to consider the modernist buildings on the RAH site as outstanding examples of their time, what has been ignored is what they represent in the history of healthcare in the 20th century.

"So while the basis of my research is about how we can transform the RAH site, the travelling prize will give the APBSA a body of work that reflects our response in the industry to issues of conservation and adaptive reuse of modernist buildings in our local context that could be the

Jet O'Rourke with APBSA Presiding Member
Gary Bonato.

basis of a new architectural strategies.”

Jet’s idea for converting the East Wing situated on the RAH into a new performing arts school and concert facility came after he posed the question, ‘what does Adelaide need?’. And as a former musician who has toured the US and Canada, music was at the forefront of his mind.

“What is almost certain is that Adelaide requires an additional secondary school, and that in terms of cultural landmarks, Adelaide’s music venues are either too big or too small,” Jet says.

“With this in mind, a strategy was devised to pair a performing arts secondary school with a new music facility for Adelaide – the East End Concert Hall – for small to medium performances and events.”

Jet will travel to Europe in the second half of this year. In the meantime he is undertaking his first commission – an alteration in Aldgate – as well as tutoring at UniSA while he takes advantage of opportunities for professional development in architectural practices in Adelaide and beyond.

This is the fourth time in four years that a UniSA student has won the Architectural Travelling Prize in Architecture from APBSA.

“The fact that this is the fourth consecutive time it has been awarded to a UniSA graduate speaks for the high quality of our graduates, the program and the teaching staff including those practitioners who contribute to the teaching program,” says UniSA Architecture Program Director Stephen Ward.

For Tom, winning the student prize in the RAH competition has given him a sense of validation.

“In the final year of a design course, you become really internalised as the process is totally consuming,” Tom says.

“To enter this work into a competition opens up this process and offers a considered interpretation of your work by others. To then go on to win gives you a sense of validation that all those late nights and stressful dreams, along with the thought and energy put into the project, has been understood and appreciated by someone else.”

Tom has been working with architecture firm Hames Sharley full-time since finishing his degree after part-time work there during university.

Jet’s vision for an outdoor amphitheatre between the concert hall and neighbouring Bice Building to promote unique urban spaces.

New Books

[Back to story index](#)

The Australian Mother Teresa of Southern India

The late Sister Mary Theodore may not be well known in her home country of Australia but she is considered the Mother Teresa of Southern India by many people in India who witnessed her work with children with disabilities.

Sister Mary Theodore's inspirational work is the basis of a newly released book, *God's Donkey, Sister Mary Theodore and the story of Mithra*, written by Associate Professor Peter Gale, Senior Lecturer at UniSA's David Unaipon College of Indigenous Education and Research.

Sister Mary Theodore started one of the first homes for children – Mithra – in India in 1977 and was also a founding leader of the Special Olympics in India.

"Sister Mary Theodore was an inspiration to many and I was inspired by her vision and her passion from the first time we met in 1983 and I was so privileged to have been able to become a close friend over the next 30 years," Assoc Prof Gale says.

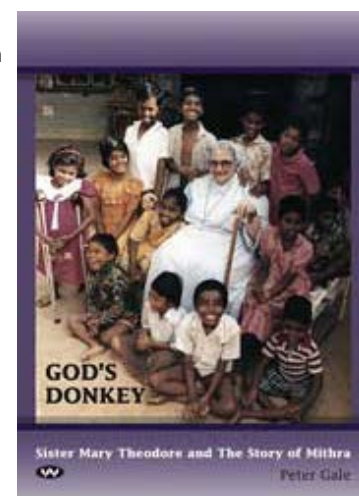

"It has been such a joy to have also been able to write a book on such a humble and gracious Australian who has achieved so much through her dedication, love and faith. I hope that many more will be inspired through her story.

"The life of Sister Mary Theodore and the stories throughout this book highlight the special relationship that has developed between India and Australia through her life and her 61 years in India, and through her care of challenged children in Chennai.

"This is a story of connections between Australia and India, and in particular, that of the many thousands of visitors, volunteers and supporters in Australia. Many Australians were inspired by Sister Mary Theodore and came as volunteers or visitors at the Mithra home for children.

"Many young Australians came to stay a week, and stayed for years. Many came and experienced something special, returning again, and again. Many, like myself, have visited Mithra over the years and were profoundly influenced by their experience and in their relationships with Sister Mary Theodore.

"Sister Mary Theodore's vision of hope and independence for children with disabilities will live on as will her legacy through Mithra as it continues to grow and develop Sister Mary Theodore's vision."

Sister Mary Theodore helped to set up Mithra, an institution that educates and rehabilitates children with mental and physical disabilities from the poorest families, during her early years as part of the Franciscan Missionaries of Mary when she was in her early 20s. She eventually left the Franciscan Missionaries of Mary so that she could continue her work with Mithra.

As the head of a non-government organisation, Australind Children's Fund, Assoc Prof Gale has helped to raise over \$1m in funding for Mithra over the past 15 years. In this role, he visited Sister Mary Theodore every year since 1998.

A few years prior to her death in 2012, Assoc Prof Gale had spoken to her about writing a book about Mithra and her life in India. He says that audio recordings taken before she passed away form a very special part of the book.

See the Wakefield Press [website](#) for more details about the book.

Skills for Academic and Career Success

A recently released book focuses on the essential skills you need to be successful in your studies and future career.

Skills for Academic and Career Success is a new book by Dr Diana Carroll, who has held several roles with UniSA, most recently as an academic in Hong Kong and workshop facilitator for Global Experience, Experience Plus and the Business Career Mentoring Program.

"The book is aimed primarily at first year tertiary students in business and humanities," Dr Carroll says.

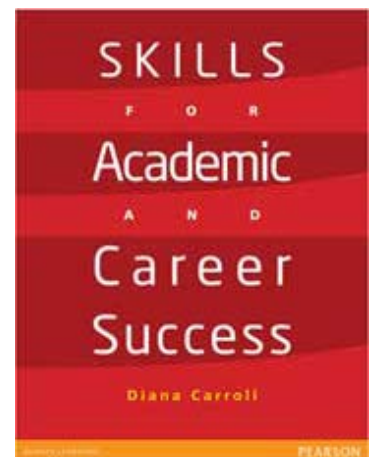

"The emphasis throughout the book is on practical, applied learning. It has been developed to complement Australian tertiary education curricula in the areas of study skills and professional communication and is designed to enhance learning outcomes for students within the Australian and Pan-Asian context."

The book is divided into three sections: People Skills, Study Skills, and Work Skills.

Three other UniSA academics also contributed to the book – Associate Professor Stephen Boyle, Sarah Hattam and Jennifer Stokes.

Hattam and Stokes co-authored Chapter 5 *Critical Thinking: Argument: Logic and Persuasion* while Assoc Prof Boyle contributed Chapter 9 *Report and Proposal Writing*.

See the Pearson [website](#) for further details.

Alternative Interventions in Aboriginal Australia

In his new book, historian and UniSA Adjunct Professor, Dr Alan Mayne, unravels a story of people, place and relationships.

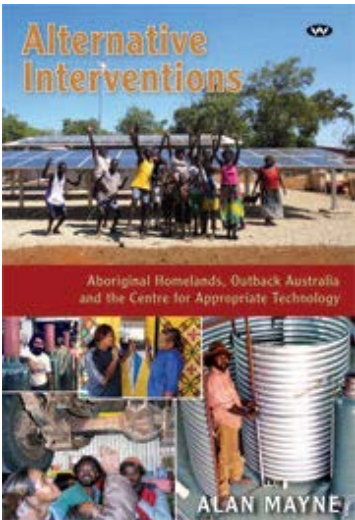

The book, *Alternative Interventions - Aboriginal Homelands, Outback Australia and the Centre for Appropriate Technology*, is described as being a journey of ideas into action and intervention through innovation.

The book explores the operation of an Aboriginal-owned science and technology organisation, which 30 years after an initial start-up grant of \$40,000, was operating with an annual turnover of more than \$20 million with 130 staff providing technical services to more than 500 remote Aboriginal communities spread across the northern half of Australia.

It is described as an institution that links people with technology by sustaining livelihoods on country.

The book is published by Wakefield Press.

Jeet Chand Great Hall looks really great, but surrounding environment ???
1 · 22 August at 18:08
University of South Australia Hi Jeet, we think so too 😊 The Great Hall is located at our City West campus and will continue to transform the vibrancy of Adelaide's West End. You can view more details about the location and other info on our website:
<http://www.unisa.edu.au/campus.../maps-tours/great-hall/>

Over the next week, UniSA will celebrate our diverse multicultural community at Multicultural Day events on each of our campuses with FREE food, activities, music and dance performances, workshops, and sport demonstrations.

Here we'll share the stories from some of our students about how they celebrate within their culture and what this year's theme ('Unity in Diversity') means to them.

Check out the full schedule of Multicultural Day events at www.unisa.edu.au/multiculturald... [See more](#)

We love to have a very big tree in our living room, where we can just sit around and celebrate a lot.

Multicultural Day is about celebrating 'Unity in Diversity' and cultures from around the world.

Next week a Multicultural Day celebration will be held on campuses from 12-2pm. The events are an opportunity for all students and staff to share and learn about different cultures and celebrate all things multicultural on campus, with a variety of FREE cultural food, activities, music and dance performances, workshops, and sport demonstrations on display.

Check the website for the full schedule www.unisa.edu.au/multiculturalday

General disclaimer

While every effort is made by the University to ensure that accurate information is disseminated through this medium, the University of South Australia makes no representation about the content and suitability of this information for any purpose.

It is provided "as is" without express or implied warranty.

The University disclaims all warranties with regard to this information, including all implied warranties or merchantability and fitness. In no event shall the University of South Australia be liable for any special indirect or consequential damages or any damages whatsoever resulting from loss of income or profits, whether in an action of contract, negligence or other tortious action, arising in connection with the use or performance of this information.

Further, the University of South Australia has provided Hypertext links to a number of sites as a service to our clients. This should NOT be taken as implying any link between us and those various organisations or individuals.

The user of the links remains responsible for any fees charged by the linked site and is reminded that merely downloading images and/or text would amount to a breach of Australian and international law unless permission is given by that site.

The University of South Australia reserves the right to alter, amend or delete any program, fee, course admission requirement, mode of delivery or other arrangement without prior notice.

Disclaimer for blogs

Blogs created by staff and students of UniSA present an unfiltered and authentic depiction of student life and staff activities at UniSA. In an effort to present this authentic depiction, the University does not censor or in any way exercise editorial control over communications of its bloggers.

Consistent with this decision not to exercise editorial control, the statements or communications of the bloggers in blogging sites linked from the UniSA corporate website do not represent a statement of the University's official position or policy.

Privacy Statement

This page outlines how the University of South Australia collects information through the use of its website. This information does not extend to external websites linked from the University website.

Collection of Information from the Website

Cookies

One way of collecting information is through cookies, which are small information files that many websites store on your hard disk. For example, when you log onto your University email from a particular computer for the first time, cookies containing your log on information will be saved to your hard disk. The server can then read your cookie file to confirm your identity for that site. Cookies can only collect information that has been provided by the user, or information such as the IP address which the server already knows.

Email addresses

The University may also collect information that you submit via any email address that you provide whilst visiting its website.

Website Usage

The University makes a record of your visit to its website using Google Analytics Web statistics service. The University logs the following information for statistical purposes - IP address, the date and time of the visit to the site, the pages accessed and documents downloaded, the previous site visited and the type of browser and OS being used. [More information about Google Analytics and privacy.](#)

Internal Users of the University Computer Environment

The University has an onus to ensure that unacceptable behaviour does not occur on the computer systems and the policy relating to [privacy on the University's IT network](#) formalises this commitment.

Privacy Policy

For information on how the University holds, uses and discloses personal information collected generally, please view the University's policy on [Privacy](#).

[< back](#)

Web accessibility

The University of South Australia is committed to ensuring access to online materials for people with disabilities. As such we aim to meet the "Level AA" rating of the World Wide Web Consortium (W3C) [Web Content Accessibility Guidelines 1.0](#) which covers Priority 1 and Priority 2 guidelines.

- [Web Content Accessibility Guidelines](#)
- [Checklist for accessible online content](#)
- [Useful accessibility resources](#)
- [Ten tips for creating accessible content](#)
- [Information for people with disabilities](#)
- [UniSA Online Accessibility Action Plan](#)
- [Web Accessibility Network for Australian Universities](#)

Web Content Accessibility Guidelines

The UniSA corporate website aims to:

- provide a [text equivalent](#) for every non-text element, for images, graphics, animations, applets etc
- ensure all information conveyed with colour is also available without colour, for example from context or markup
- use style sheets for layout and presentation
- use tables to mark up tabular information, for example data tables (not for layout purposes)
- ensure pages are accessible when viewed in older browsers, for example a browser that does not recognise style sheets should be rendered so that it is meaningful
- use relative rather than absolute unit sizes so that text in a window can be resized to larger (see [Using this website](#))
- ensure that moving, blinking or scrolling text can be paused or stopped
- ensure that pages are usable when scripts, applets, or other programmatic objects are turned off or not supported
- provide clear navigation mechanisms.

For more detailed information please see the [UniSA Web Authoring Guide](#) for authors maintaining sub-sites within the UniSA website and developing online material.

Web accessibility information for people with disabilities

If you are having difficulty accessing any online materials produced by the University because of a disability please contact disability@unisa.edu.au.

Please provide the following information:

- your contact details
- the location of the page you are accessing
- the operating system and browser version you are using
- any other software you are using

- the nature of the problem you are experiencing.

The University's disability service will then make arrangements to provide you with the information you are seeking in an accessible manner.

Information about the full range of disability services provided by the University is available at [disability services for students](#) and Human Resources [Equity and diversity - disability](#) information

Further contact details

If you've got an enquiry and would like get in touch with UniSA, you will find our contact information and campus location details listed below.

General enquiries

University of South Australia
GPO Box 2471
Adelaide, South Australia 5001
Australia
Ph 1300 301 703
Fax +61 8 8302 2466

The University switchboard is attended from 9am to 5pm, Monday to Friday. If you know the extension of the person you wish to contact, dial (08) 8302, followed by the last four digits of the extension. You can also search for staff telephone numbers in the [Directory](#).

Dialling information for external callers

Please note that all standard landline telephone numbers throughout Australia are eight digits in length. Australian mobile and toll-free numbers will differ. The numbers listed within this directory are internal university extension telephone numbers (unless otherwise indicated.)

For example, to call a university extension 26611:

- within the university, dial 26611
- within Adelaide (local number) and/or the 08 region, dial 830 followed by the extension eg 830 26611
- within Australia but outside of the 08, dial 08 83026611
- outside of Australia, dial (your international access number), then 61 8 830 26611

Security

All hours 1800 500 911 – free call
(Internal callers dial 88888)

- [Accessibility](#)

Software requirements

Several documents on this website are available in Portable Document Format (PDF). To view these files, you may need to download and install Adobe Acrobat Reader.

- Follow this link to download the latest version of [Adobe Acrobat Reader](#).

Software downloads available via links from this site are third party products. These products may be subject to a licence agreement between you and the relevant product owner. To the extent permitted by law, UniSA accepts no liability in respect of such third party products and UniSA provides no warranty and gives no endorsement in respect of such products or any party connected with them.

Viewing options

The UniSA website has been designed to accommodate as wide an audience as possible. As such, all commonly available browsers are supported on this website. However, the site is best viewed with Internet Explorer version 5.5 or later at a resolution of 800 x 600 pixels. If you need to enlarge the screen the best way to do so is to use the zoom option located at the bottom right corner of your browser as this will not affect the layout of the page detrimentally.

- Follow this link to download the latest version of [Internet Explorer](#).

Please note that when viewed on Netscape there is some degradation to the look and feel of the site although navigation is not hampered. Users of Netscape should take note of the [Netscape end of support notice](#).

- Follow this link to download the latest version of [Firefox web browser](#).

Navigation

There are a variety of ways to find information on this website. The groups of links at the top of the home page provide the main navigation to key areas of content. In sub pages, navigation menus on the left hand side link to more detailed information within the site.

The grey navigation bar at the top of the home page and every page provides quick access to frequently accessed information, including the search function. Privacy, disclaimer, copyright, contact, accessibility and CRICOS information is available from the footer. A web enquiry facility is available in the [Contact UniSA](#) page.

Accessibility

If you have a disability, refer to our [web accessibility](#) information. The [Adobe Accessibility Resource](#)

[Centre](#) provides tools that can help people who use speech readers to read the content of PDF documents. If you are encountering difficulties accessing the UniSA Corporate website, please email webenquiry@unisa.edu.au.

[Home](#) > UniSA Open Day 2016

Open Day was held on Sunday 14 August

This year's Open Day was the best yet with over 90 presentations, 80 information

booths and 43 things to see and do. We hope you enjoyed your time on campus and found all the information you needed about your pathway and study options. If you still have questions, make sure you attend our Open August Events or contact our [Future Student Enquires Team](#).

Missed a presentation?

If you didn't manage to make it to Open Day, watch our [program overview videos](#) to find out more about the range of programs on offer.

What's next?

UniSA's Open August Events

Open Day is held at our City West and City East campuses and is a great chance for you to explore all the study options on offer at UniSA in the one spot. Once you have decided on your direction, you will have another opportunity to step onto our Mawson Lakes, Magill and Whyalla campuses. You can explore the facilities and hear from current students, staff and industry professionals. Attend Magill @ Twilight if you are interested in studying Education, Psychology, Social Work, Communication, Media & Arts. Discover Mawson is for those thinking about careers in the areas of engineering, information technology, environmental science, geospatial science, science and advanced materials, aviation and mathematics. Find out about education, nursing, social work, business and Foundation Studies at Whyalla Open Day.

Event	Date	Location
Magill @ Twilight	Wednesday 24 August	Magill campus
Discover Mawson	Thursday 25 August	Mawson Lakes campus
Whyalla Open Day	Sunday 28 August	Whyalla campus

[Further information and registrations](#)

Open August events

UniSA's Open Day is part of Open August, a series of events giving prospective students and parents a range of opportunities to visit our campuses, ask questions and assist with the selection of courses and careers.

Browsealoud

[Browsealoud](#) is a text to speech tool that you can download and use on our website. It converts text to audio which allows the content of our websites and any Browsealoud capable website to be read to you.

Features

- reads aloud all website content including PDF and MS Word documents
- words are spoken aloud as you move your cursor over them
- choose the voice to use
- change the reading speed
- create shortcut/hotkeys to start/stop reading
- have the program start when the computer starts

System Requirements

In order to download and run BrowseAloud, you must have the following System Requirements:

PC users

Operating Systems: Windows XP, Vista and Windows 7
Pentium 4 1.8GHz Processor 512 MB RAM (1 GB RAM recommended on Windows Vista and above)
Sound Card + Speakers
15MB Free Disk Space

Recommended Browsers: Internet Explorer 6, 7 or 8. Firefox 3.6
For PDFs: Acrobat Reader 9

Apple Mac users

OSX 10.3.9 or later (now supports Mac OSX Snow Leopard)
256 Mb RAM (512 Mb is preferable)
Compatibility with Power PC or Intel processor.
Browser: Safari v3 or later 20MB disk space

For more information or support please visit the [Browsealoud support](#) page.
